

BUSINESS PROBLEM STATEMENT

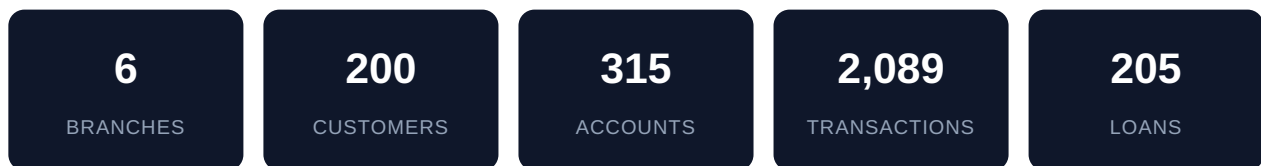

Banking & Finance Data Analysis

Business Context & Analytical Questions

About the Business

Who this analysis is for

This project is built around a retail bank operating across multiple branches in India. Like any retail bank, it serves customers through savings, current, and fixed deposit accounts; issues debit and credit cards; processes day-to-day transactions across channels like UPI, ATM, mobile, online, and in-branch; and extends loans across home, personal, auto, education, and business categories.

The Problem

Why this analysis is needed

Like most banks, the data here lives across separate operational tables — customers, accounts, transactions, loans, and cards are all recorded, but nobody has connected them into answers. Four teams have been asking around for numbers that nobody could produce quickly:

GROWTH & MARKETING

Who are our best customers, and who is quietly going inactive?

OPERATIONS

Which channels are customers actually using, and where should we invest?

FINANCE

Are we seeing healthy cash flow, and which branches are performing best?

RISK & LENDING

Where is our loan book most exposed, and which products default the most?

This project answers all four sets of questions using SQL alone — turning raw transactional data into answers each team can act on.

The 20 Business Questions

Grouped by who's asking

● **Customer & Growth** (5 questions)

● **Operations & Channels** (4 questions)

● **Finance & Performance** (6 questions)

● **Lending & Risk** (5 questions)

Customer & Growth

- Q1 Which customers joined recently, and how do we onboard them well?
- Q2 What does our account mix look like — which products carry the business?
- Q3 Who are our top customers by transaction activity, and how do we retain them?
- Q4 Which customers have never transacted, and are we losing them to inactivity?
- Q5 How do we segment customers by value and activity, so marketing and risk can act differently on each group?

Operations & Channels

- Q6 What do the most recent transactions look like, for daily reconciliation?
- Q7 Which channels (ATM, UPI, Online, Mobile, Branch) do customers actually use?
- Q8 By transaction value, not just count, which channels matter most?
- Q9 Is the average transaction size different across channels — are branch visits really bigger-ticket?

Finance & Performance

- Q10 Are deposits outpacing withdrawals — is the bank seeing healthy net inflows?
- Q11 How is transaction volume trending month over month?
- Q12 What is the cumulative deposit trend so far this year, against target?
- Q13 What is the month-over-month growth rate, and are there any sudden drops worth investigating?
- Q14 How much total balance does each branch hold, and which branches are highest-value?
- Q15 Within each branch, who are the top depositors?

Lending & Risk

- Q16 What does our loan portfolio look like by type and status (Active / Closed / Defaulted)?
- Q17 What is the typical loan size for each loan product?
- Q18 Which customers hold more than one active loan, raising concentration risk?

Q19

Which loan type has the highest default rate, and should underwriting tighten there?

Q20

Who is the single largest borrower at each branch — our biggest point of exposure?
